(54) Ferroelectric film of fluorooolefin copolymer and method of forming same.

(57) The invention provides a ferroelectric film of a copolymer which comprises at least 90 mol % of vinylidene fluoride and trifluoroethylene in a molar ratio of from 70:30 to 90:10 and which has a number average molecular weight from 3×10^4 to 30×10^4 , a Curie point not lower than 70°C and an enthalpy change of not less than 5 J/g at said Curie point, and another enthalpy change of not less than 24 J/g at a melting point determined by differential scanning calorimetry, the film being formed from a solution of said copolymer. The film is formed by applying a 0.01-20 wt% solution of the copolymer in an ether to a substrate, drying the liquid film and baking the dried film at 70-160°C. The film has a high value of residual polarization and is useful, for example, in liquid crystal display devices.

Abstract of JP4311711

PURPOSE: To provide a ferromagnetic material having a large residual polarization value and capable of being applied to various display devices, etc. **CONSTITUTION:** A copolymer comprising vinylidene fluoride in an amount of 70-90mol% and trifluoroethylene, as the principal components, and having a mol.wt. of 30000-300000, a Curie point of ≥ 70 deg.C, an enthalpy change of ≥ 24 J/g at the melting point by DSC measurement and an enthalpy change of ≥ 5 J/g at the Curie point. The ferromagnetic thin film is obtained by coating a substrate with 0.1-20wt.% of a solution of the copolymer having the above composition in an ether-based solvent and subsequently baking the solution at 80-160 deg.C.
